

Native iOS & Android Apps for XenForo Communities

Most forum users are accessing your site using mobile web browsers instead of a native app that drives **higher engagement** and **increased revenue**.

Launch a native app that lifts engagement and revenue.

Try Pitch

Mobile has taken over. But forums haven't caught up.

Mobile web is clunky, leading to a higher bounce rate and less posting

01

50-80% of traffic comes from mobile phones

But the mobile web **experience is painful** — slow, clunky, and hard to use. This leads to high bounce rates, lower engagement, and missed opportunities to build community.

02

Forums are being disrupted by Reddit, Discord & Social Media

Modern users expect fast, beautiful, app-native experiences. When forums feel outdated, **users don't hesitate to leave** — even for platforms that offer less depth or value.

03

Forums struggle to retain users and grow their communities.

Most forums have great content — but **poor UX**. Without better mobile tools, new users don't sign up, existing users don't stick around, and longtime members post less often.

The result? **Shrinking engagement**, stalled growth, and **declining revenue**.

Relying on search alone is riskier than ever.

AI + Google algorithm swings = fewer clicks and unpredictable referrals

01

Fewer clicks from search

Roughly **60%** of Google searches now end without a click to a website. AI Overviews and similar in-SERP answers satisfy queries on the results page, **reducing outbound clicks**.

02

AI is shrinking organic traffic

Gartner forecasts a **~25% decline** in traditional search volume by 2026 as users shift to AI chatbots/answer engines.

03

What this means for forums

Owning a direct channel (your app) reduces reliance on volatile search referrals so your loyal users stay engaged and keep coming back.

A native mobile app gives you a **direct channel** (push notifications, home-screen presence) that brings users back and **reduces dependency** on external platform changes.

<https://datos.live/blog/predicted-25-drop-in-search-volume-remains-unclear/>

What if forums weren't stuck in the past?

01

Built for mobile-first behavior

Tap, scroll, post, DM — instantly. Give users a fluid experience that is **native, fast, and intuitive**. No more reloading, pop ups, pinching or zooming.

02

Designed to boost engagement

Push notifications, smooth media uploads, and DM-like messaging **drive more engagement** like threads, posts, and time spent in the app.

03

Beautiful, modern design

Clean, scrollable layouts and visually polished UI make your community feel fresh — not outdated. It looks and feels like the apps your users already love.

04

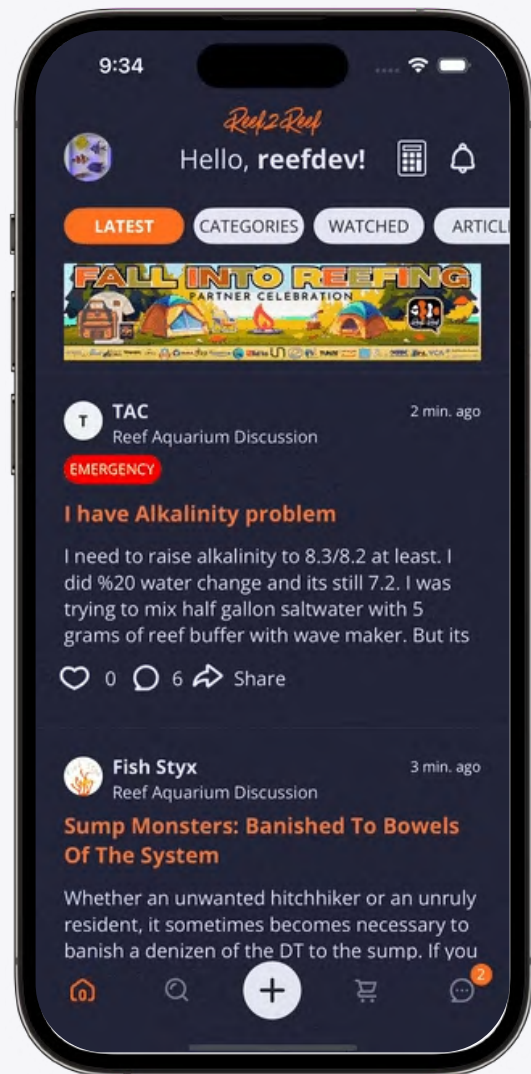

Fully integrated with your forum

No duplicate logins or third-party platforms. We use your forum's API and data — so **users get the full experience**, just reimaged for mobile. And all the data is stored on your servers.

The result? More **loyal** users, better **community growth**, and **increased revenue** — all without changing your web setup.

Forumly builds beautiful, fast native apps for XenForo communities.

Delivering the app experience your forum users expect — modern, intuitive, and mobile-first.

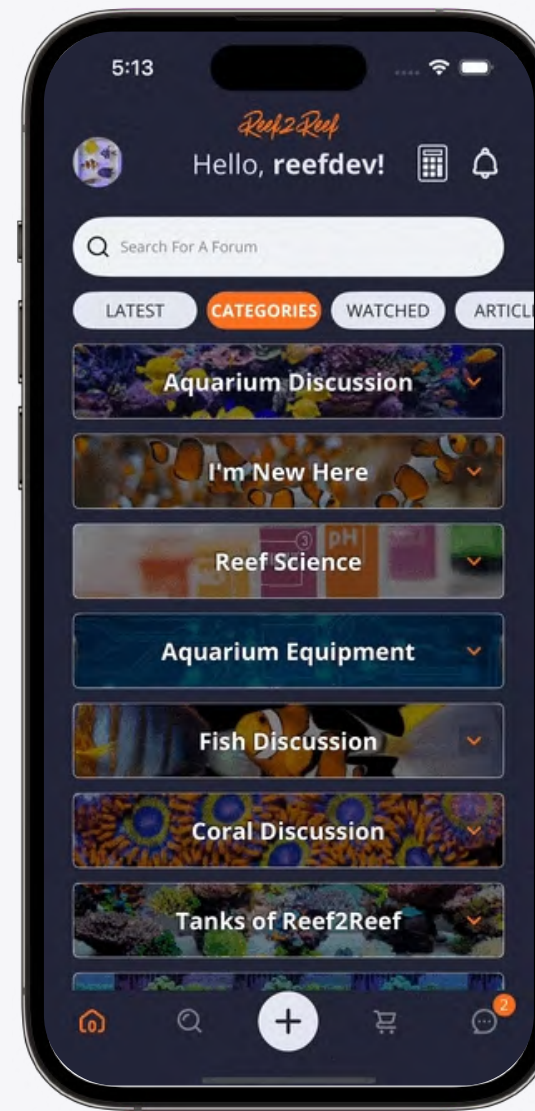

Scrollability

A modern thread feed makes browsing intuitive, helping users discover more and stay longer

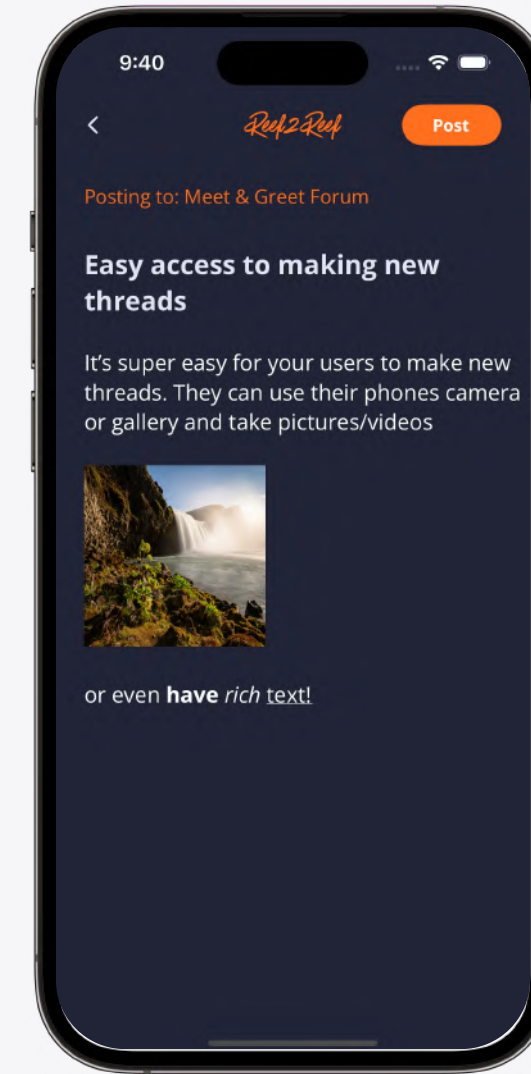

Push Notifications

Instant alerts bring users back for comments, replies, DMs and more

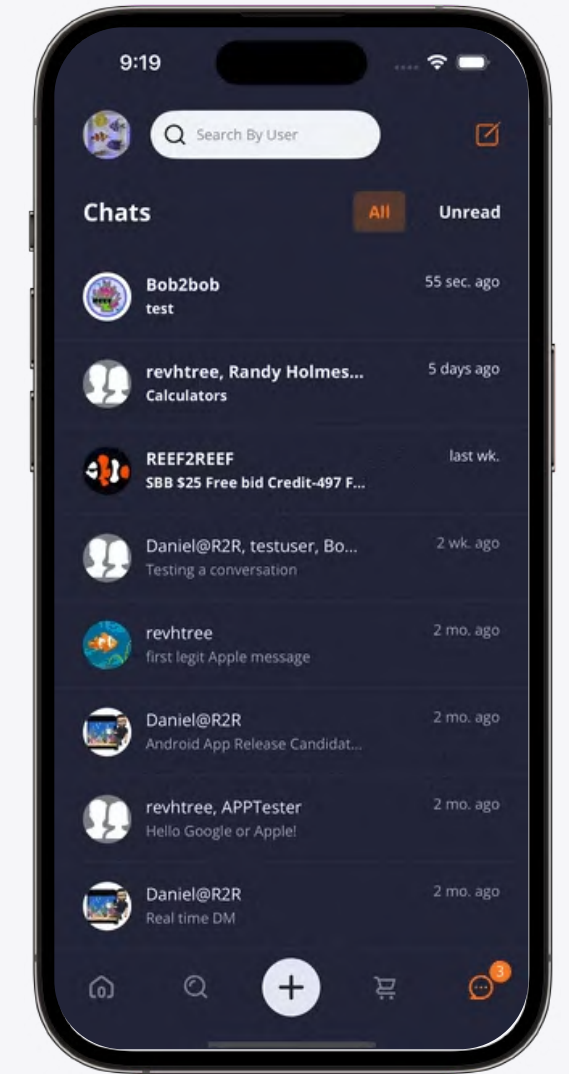

Forum Organization

Instant alerts bring users back for comments, replies, DMs and more

Easy Posting

We make it easy for users to post new threads and replies including using their phone's native camera/gallery

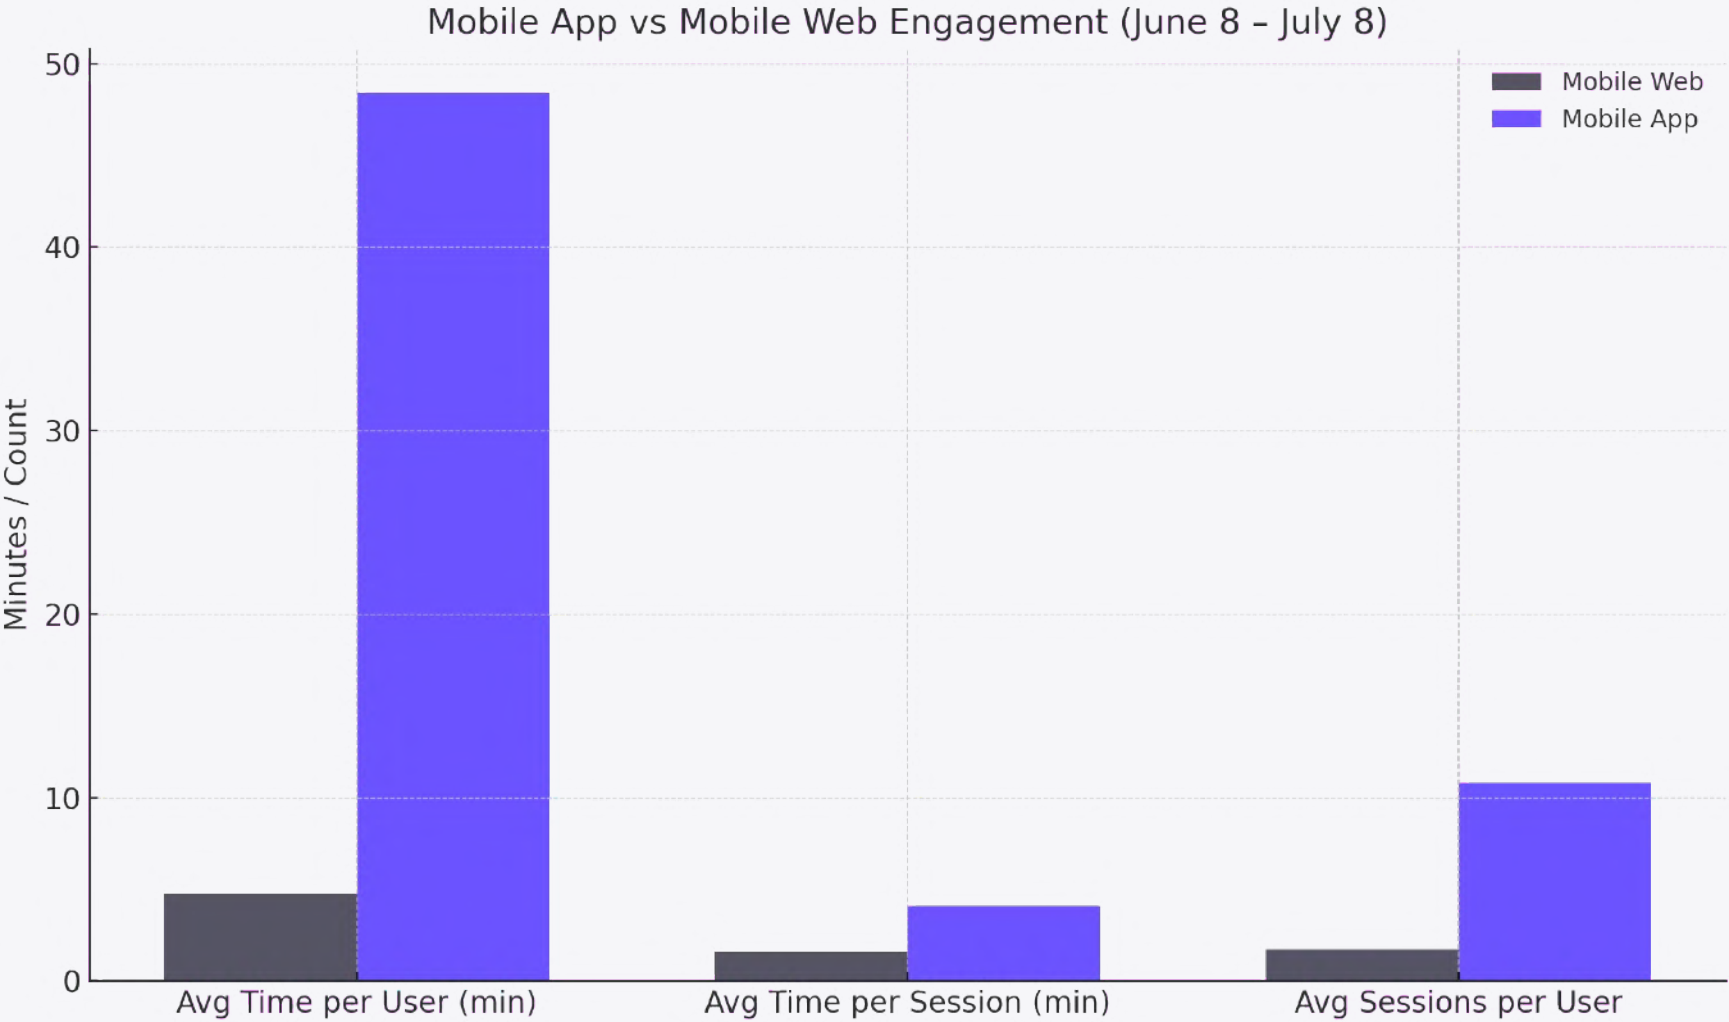

Conversations as DMs

We bring a modern approach to how conversations work, keeping users in the app

Engagement increases dramatically with native apps

Native mobile apps aren't just prettier — they keep users **coming back, for longer.**

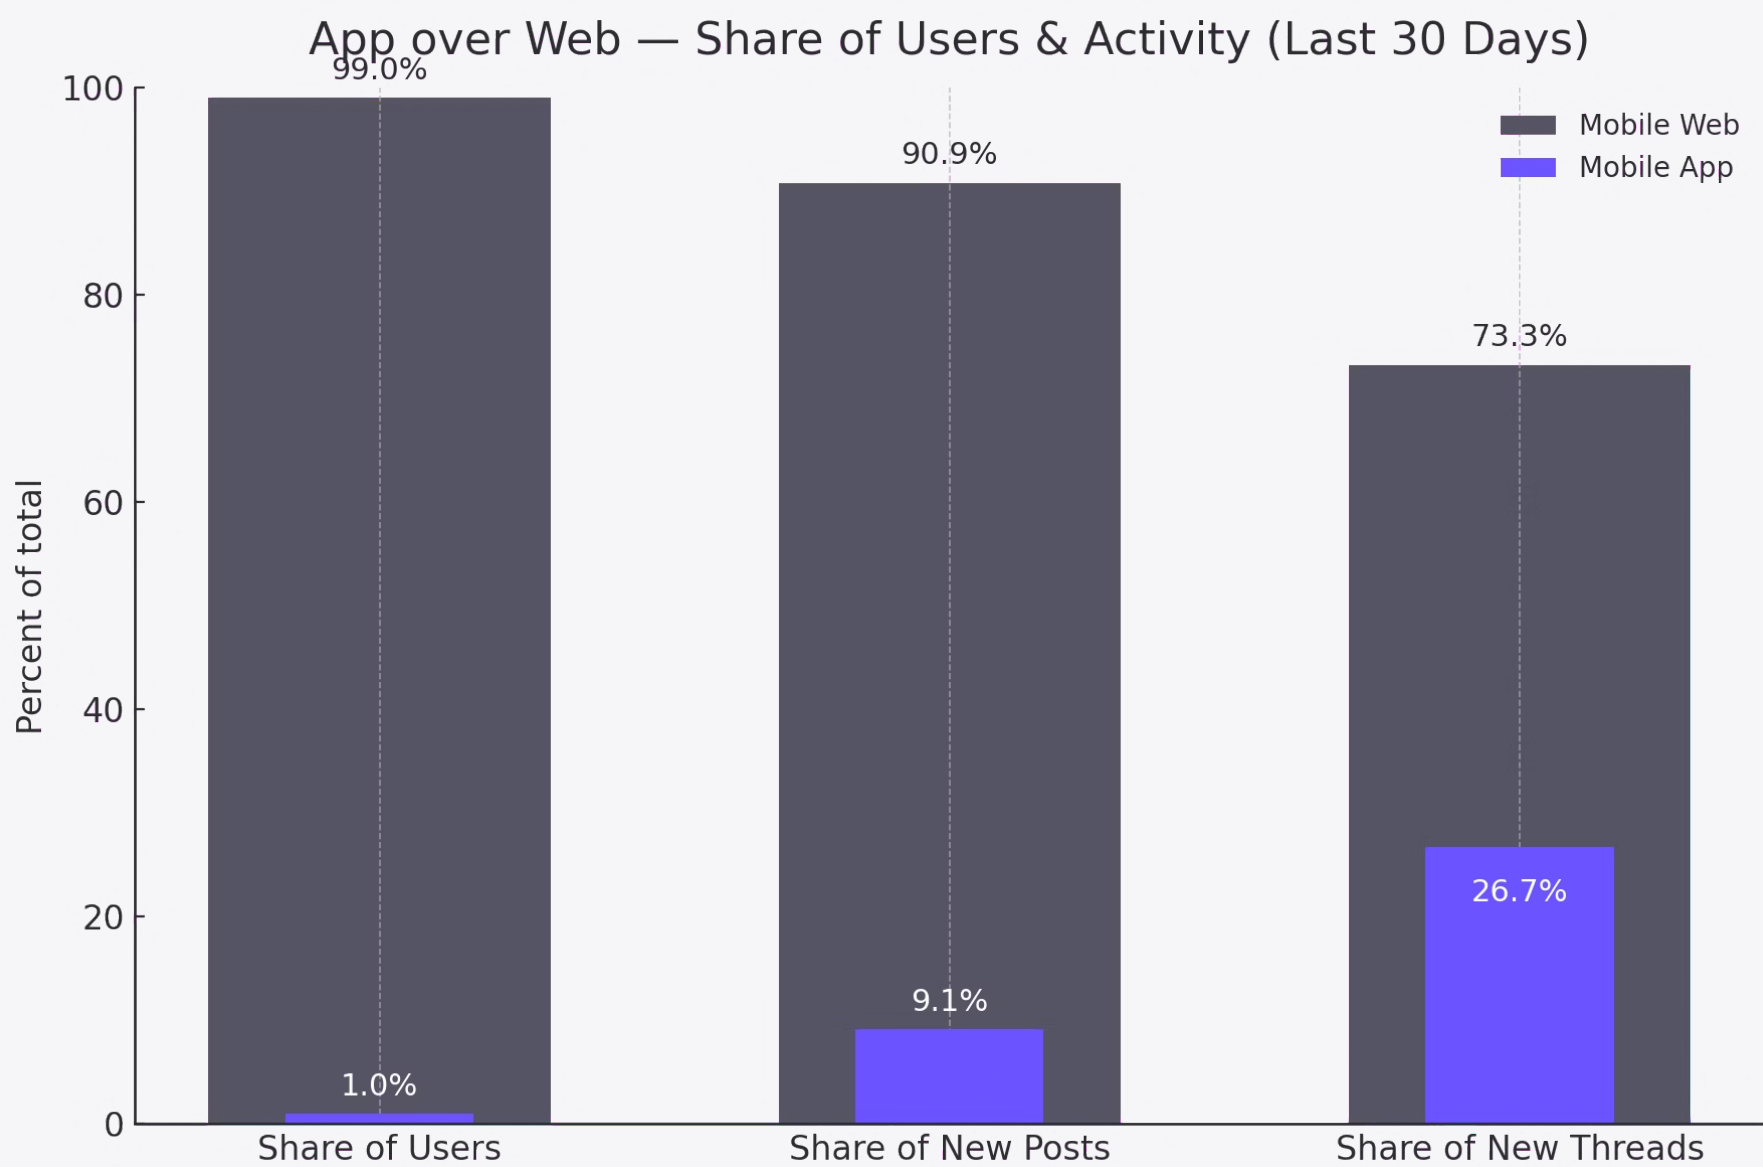

10× increase in total engaged time per user
(over a 30 day period)

2.5× increase in engaged time per session
(over a 30 day period)

6× increase in sessions per user
(over a 30 day period)

Native app users make an outsized impact on content

R2R App users make up approximately **1%** (n=3600) of monthly users but drove **~9%** of new posts and **~27%** of new threads. On a per-user basis, app users posted **~10×** more than web users and started **~37×** more new threads.

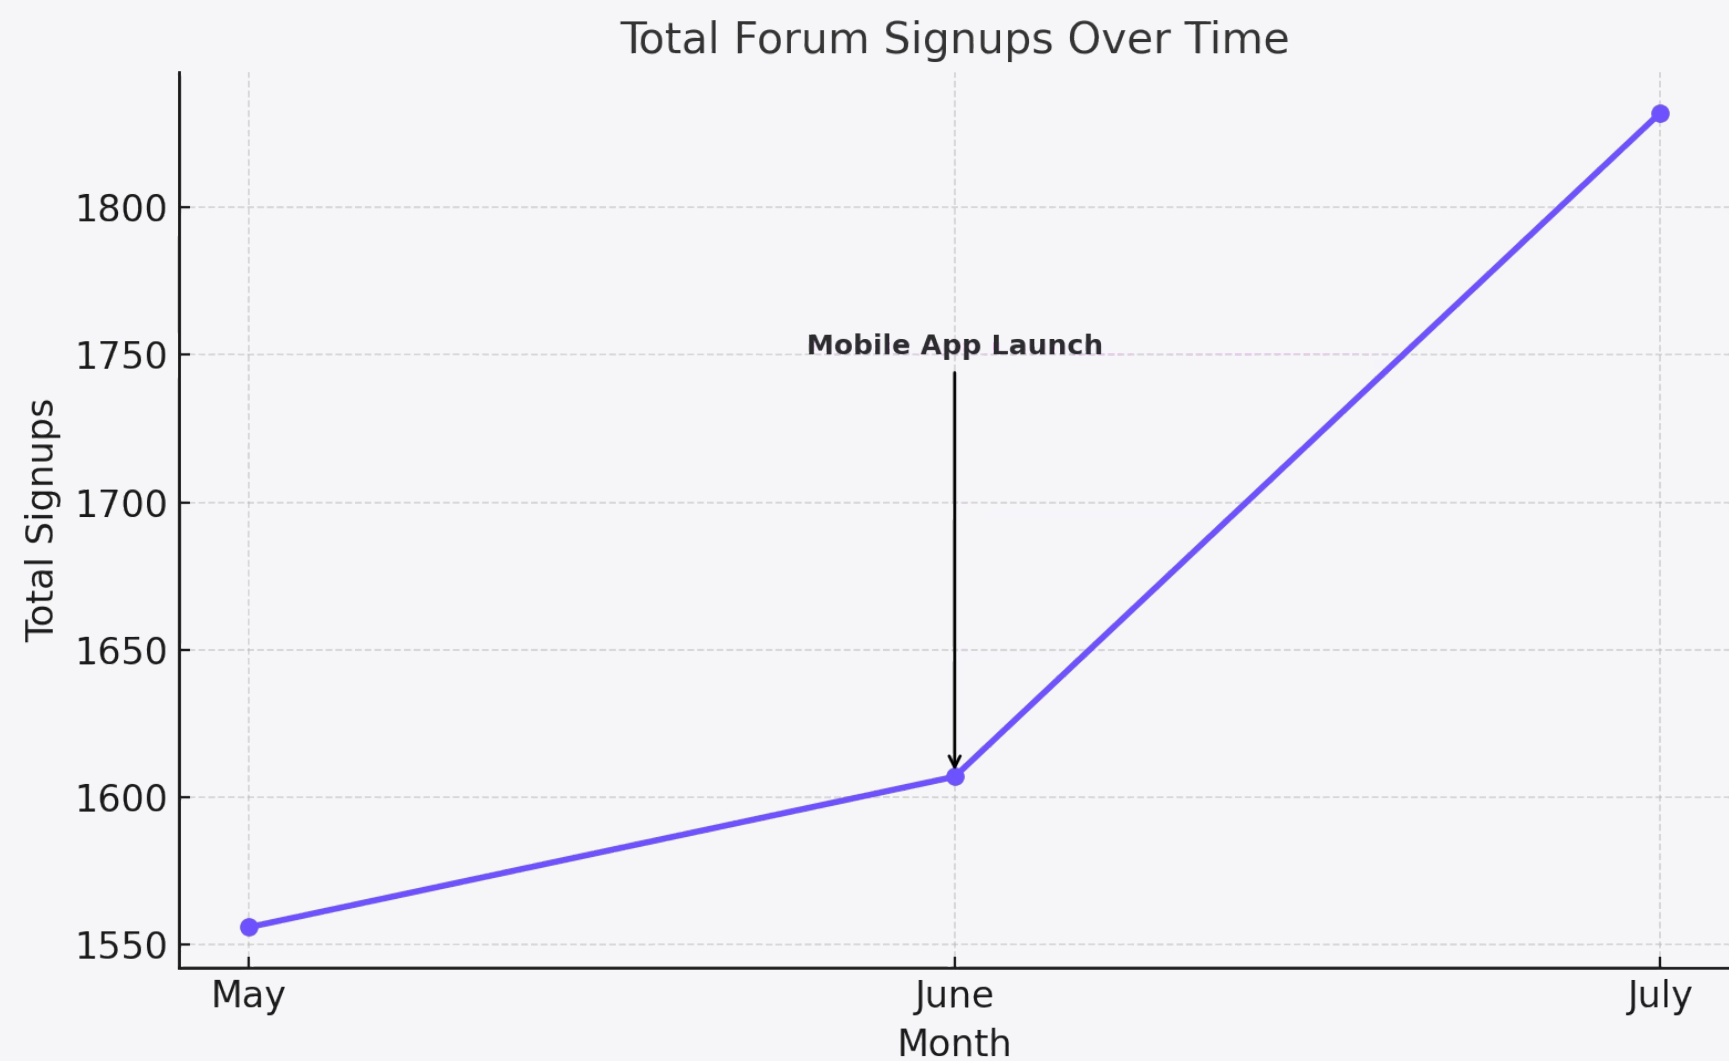

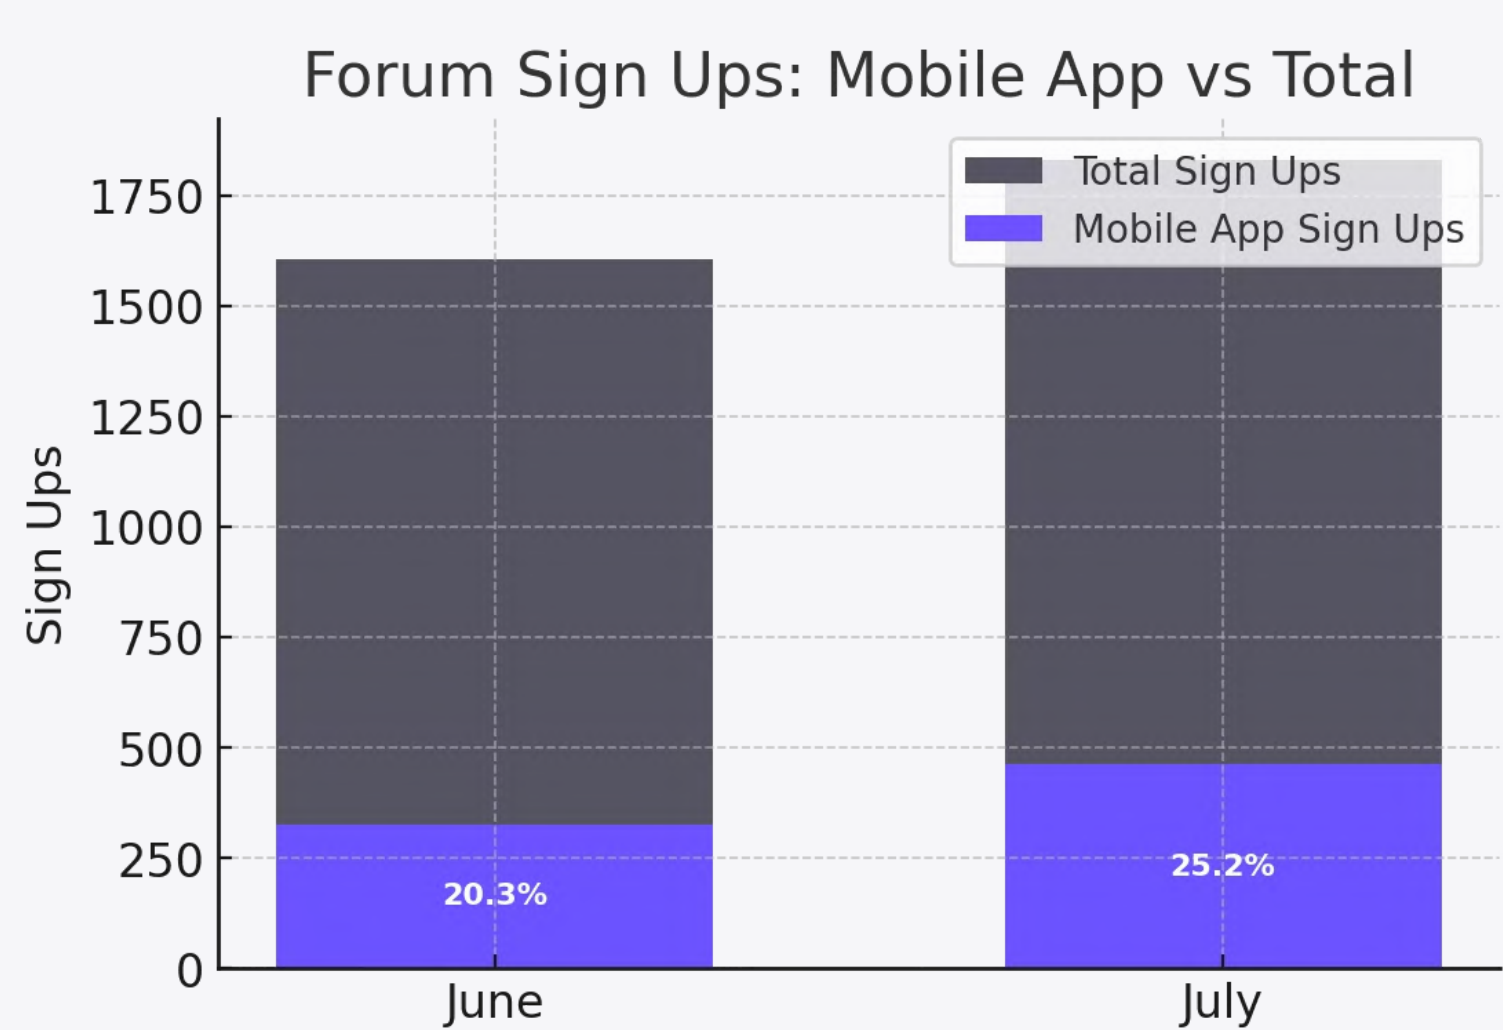

10× increase in posts per user
(over a 30 day period)

37× increase in threads per user
(over a 30 day period)

Increase sign ups and grow your community

Sign ups within the mobile app account for **20–25% of total sign ups**. Native apps allow for a significant portion of new users who prefer an app interface to the traditional forum UI/UX.

Increased Revenue

Native app ad inventory outperforms mobile web with in-app ad quality leading to **stronger CPMs** and **higher engagement** click through rates.

01

Higher viewability

In-app ads are simply seen more. US mobile app display viewability is **~86.8%** (IAS 2024), vs lower on mobile web. Buyers can bid on **vCPM** (paying only for *viewable* impressions), so higher viewability directly lifts yield.

02

Better formats = better outcomes

Apps get the premium mixes buyers want: native, interscroller, and video. Apps capture **~82%** of mobile ad spend, and **in-app video >30%** of US mobile ad spend (eMarketer 2024). Better completion + attention = stronger CPMs.

03

More time & more visits

Our app users **come back ~6× more often** and **stay ~2.5× longer** per session vs mobile web. That's a compounding lift in impressions per user. Plus, apps aren't hit by browser extension ad-blockers—so more of that inventory actually serves.

Users Love The App

mdbannister

★★★★★ 6/3/25

I love the app! Sleek design! Real-time DMs! Great way to connect to the community!

Chandler David

★★★★★ 6/9/25

The new app works great. it also looks so much cleaner. thanks for putting in the work!

Jim Galbraith

★★★★★ 6/4/25

App is easy to use and convenient to keep you on top of forum happenings while on the go

John Dymon

★★★★★ 6/2/25

Great app to supplement the reef forum site. Nice design and all in one place.

Steve

★★★★★ 6/8/25

So far I am enjoying the new app rather than browsing R2R from a browser on the phone. It is much easier to navigate. One of the features I like is that there is a refresh button instead of swiping all the way to the bottom to refresh.

Morgan And Woodstock

★★★★★ 6/4/25

I love that this app has a dark mode feature, spares my eyes during the 2am thread binges! The organization is easier to follow through the app as well I feel, and honestly the convenience of having such a wealth of information at my fingertips no matter where I am is priceless. Love the app so far.

Zakary McLeod

★★★★★ 6/3/25

This new reef2reef app is a great overhaul compared to the old web based version. It loads faster, looks sleeker, and is easier to navigate. This is definitely THE app for any saltwater aquarium enthusiast. If you seek answers to an aquarium related question, you will find them here if they exist.

Razvan Caliman

★★★★★ 6/2/25

Nice interface and very user friendly. Very easy to find threads you are looking for and much easier to upload pictures/videos compared with the website. Definitely a step up for Reef2reef members

Sleekness and easy of adding photos...

★★★★★ Jun 7 · Lilmatty5dimes

The sleekness of the app to navigate is perfect. Making it easy to switch between categories whether you need help IDing a Zoa or a simple question of how the fish are doing or a question about the equipment moving between them is perfect. Added bo...

Yes!!!

★★★★★ Jun 5 · Changster24

While I love R2R I never really enjoyed the mobile experience (until now). This app is a game changer. Way easier to scroll and browse threads, watch videos, etc. Only a few days in but it's exceeded expectations so far

The Reef2Reef App We've Been Waiting For!

★★★★★ Jun 2 · CTO_Reefer

So glad Reef2Reef finally has its own app! Navigating the forum is way smoother and faster compared to using a browser on my phone. The layout is clean, notifications work great, and it's super easy to keep up with threads and tank builds. Huge win for the reefing community!

Great App

★★★★★ Jun 10 · The Salty Fox

App is easy to use and is quicker than using the website on my phone. It is very user friendly and navigation is simple. Search feature works great to find forums to help with any issues.

R2R

★★★★★ Jun 16 · Benard Nelson

Solid launch for the app. Makes everything that was good on the original forums more streamlined.

Awesome

★★★★★ Jun 21 · Beansbro1

Love being able to access the forums in one click. App is awesome well laid out and works great

Wonderful app

★★★★★ Jun 3 · Wonkabar12

This app has been a long time coming and it is so much easier to grab and use to interact with the forum than the web browser.

About time

★★★★★ Jun 2 · Walter Cuvet

Awesome- huge upgrade over the mobile browser. Very sleek.

Real reviews from the Apple App Store and Google Play Stores

<https://apps.apple.com/us/app/reef2reef/id6745577135?platform=iphone> (4.8 🌟)

Feedback from a forum owner

“With our new app we not only have a tool that can help us stay viable, but we have something that gives us other avenues for growth in an ever evolving social landscape.”

“On a personal note, I have never trusted an outside company like I have trusted Nathan and Forumly and they haven’t disappointed on any level.”

– David Hammontree (@revhtree), Reef2Reef.com owner

Reef2Reef

Why we're different

Your brand. Fully native. Built for XenForo—on your servers.

01

Your app, your brand (unlike Tapatalk)

Unlike Tapatalk, this is **your app**—not an aggregator. Your name, icon, screenshots, and reviews live in the App Store and Google Play. Push notifications come from **your brand**, deep links open straight to your content, and all engagement and analytics accrue to **your property**.

02

Fully native experience (unlike wrapper/hybrid options)

Unlike Audentio's and other apps utilizing webviews our app is **fully native** on iOS and Android. We parse BBCode into native UI elements so posts feel like modern, tappable screens. The composer is fast and familiar—inline media, camera/gallery access, and smooth scrolling.

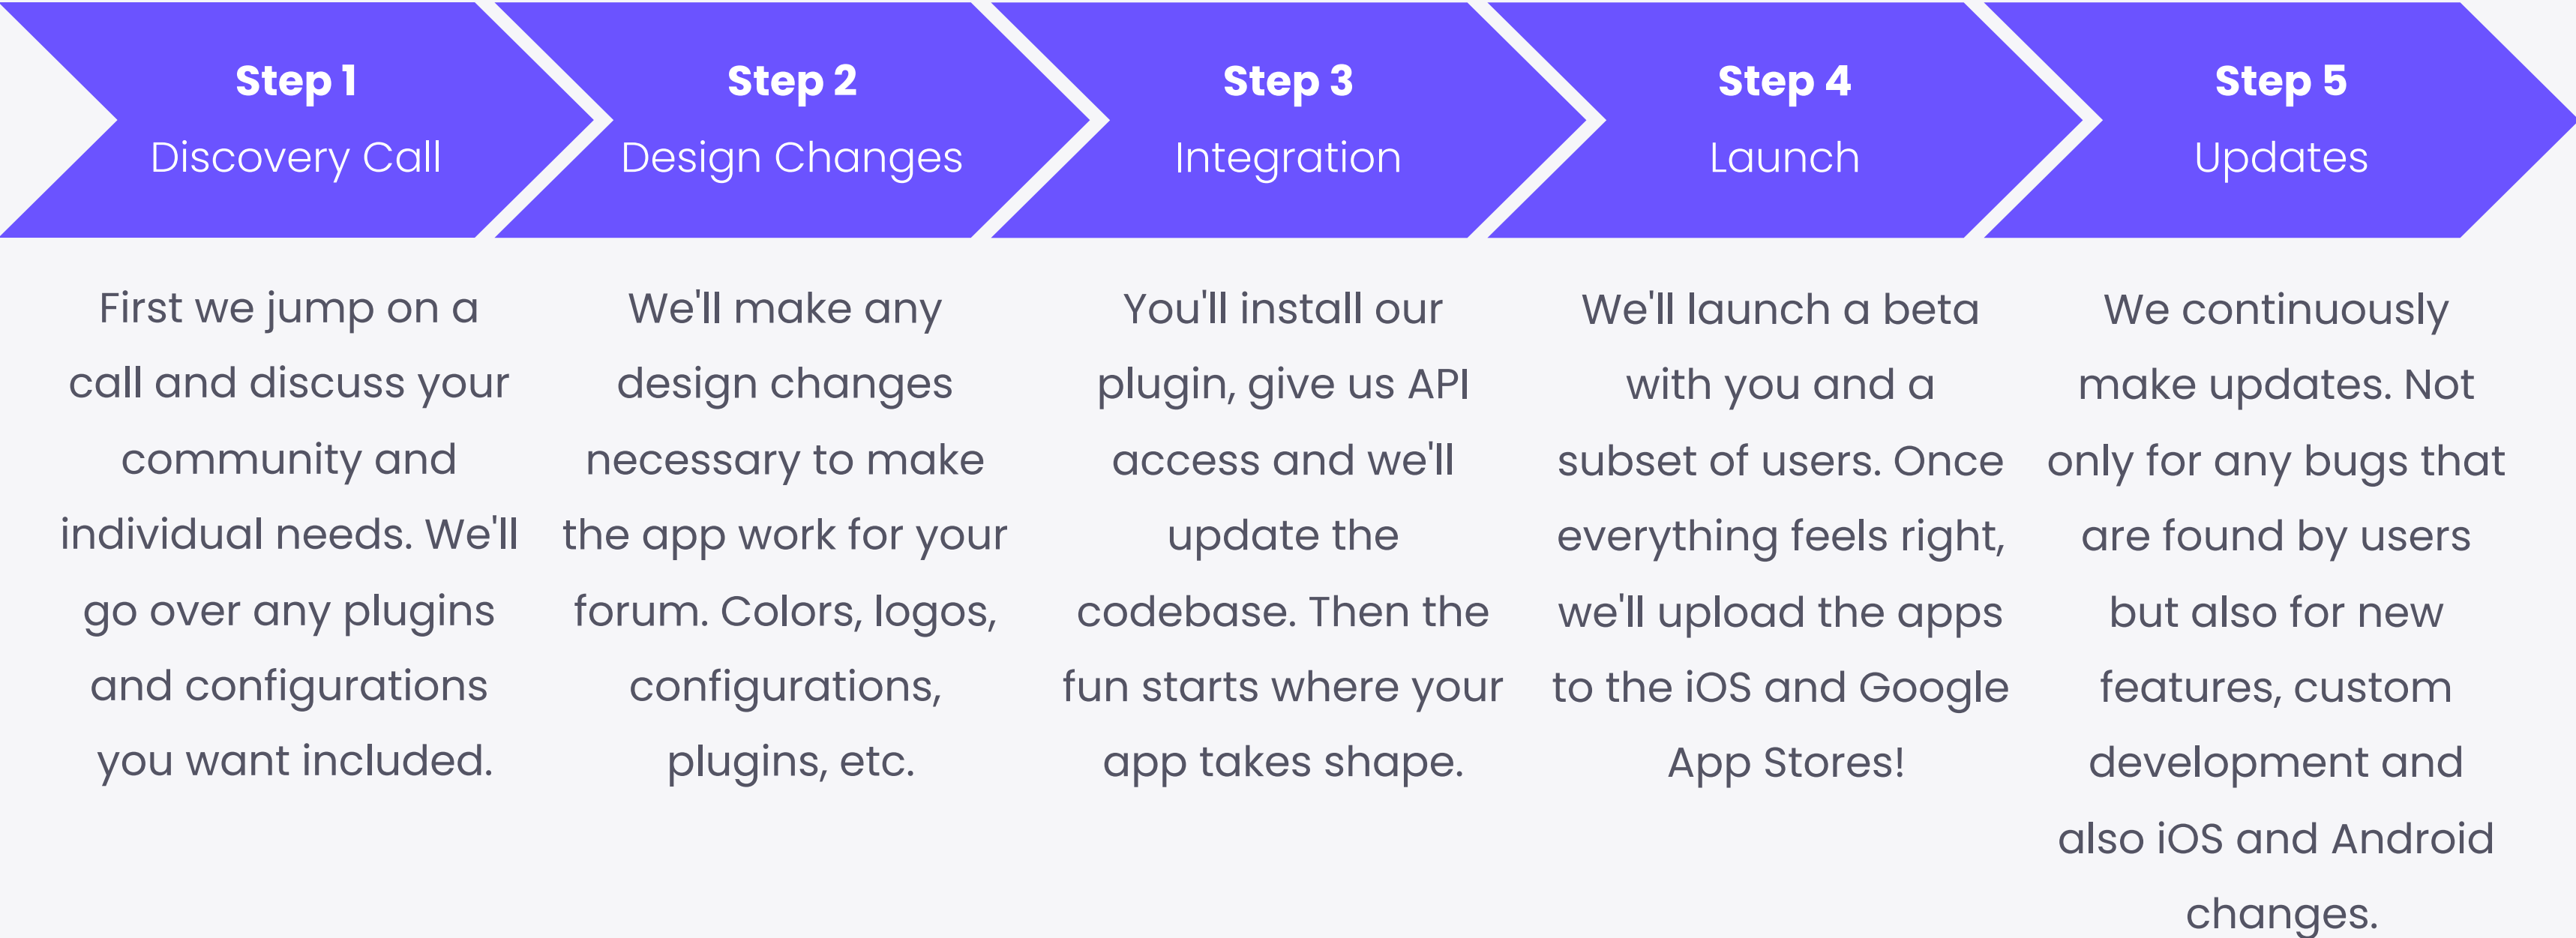

03

Operator-first, XenForo-first

We integrate via the **XenForo API + a lightweight add-on** for data, permissions, moderation, search, etc. All data stays on **your servers**; we're simply a new front end, that doesn't disrupt the existing web app while offering your users an alternative experience.

The proof is in the pudding. App users deliver **~6×** more sessions, **~2.5×** longer sessions, driving **~10×** the number of posts/user and **~37×** the number of new threads/user vs mobile web over a 30 day period.

How it works:

Generally this process will take 3-6 months from day 1 to launch

Pricing: we pay you!

We benchmark your current mobile-web **revenue per active user (RPU)** as a **hurdle**, and we don't take any share until the app's RPU exceeds that hurdle. Then we do a revenue share.

Upfront Cost*

\$6,000

Covers **onboarding, design, plugin updates, configuration changes, customization, store submissions** (Apple App Store & Google Play)

We also cover constant updates & improvements

Revenue share (RPU-based)

50% ad share after hurdle

We benchmark your current **mobile-web revenue per user (RPU)** as a hurdle, and we don't take any share until the app's **RPU exceeds that hurdle**. We split the **incremental lift 50/50**—you keep **100% up to the hurdle**, and then receive half of everything above it.

Examples

(Hurdle = \$0.05 RPU)

If you currently make \$0.05 RPU on mobile web then we set the hurdle to that.

- App RPU = **\$0.04** → **You:** \$0.04 • **Us:** \$0.00
- App RPU = **\$0.07** → **You:** \$0.06 • **Us:** \$0.01
- App RPU = **\$0.10** → **You:** \$0.075 • **Us:** \$0.025
- App RPU = **\$0.15** → **You:** \$0.10 • **Us:** \$0.05

This applies to **app ad revenue only**; your existing web revenue is untouched, with monthly reconciliation and transparent reporting.

***Zero-upfront option:** we recoup **2× the setup fee** from app ad revenue **before** the rev-share begins—so there's **no upfront cost**.
